Hob milling with cemented carbide

CERATIZIT is a high-technology engineering group specialised in cutting tools and hard material solutions.

Tooling a Sustainable Future

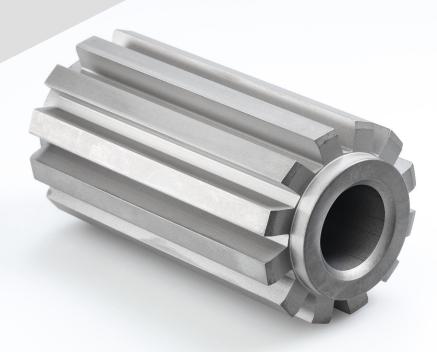

Maximum efficiency for gear wheels – with carbide blanks for the hob industry

As a tool manufacturer you naturally expect only the best: to get the solution you need for the cost-effective production of gear wheels just when you need it. CERATIZIT specialises in the production of hobs, and offers you favourable delivery times and customer-specific carbide blanks for hobs, peel milling cutters and gear cutters which guarantee a consistently high metallurgical quality at all times.

Passion - precision - process reliability

Whether you make delicate gear wheels for the watch industry, supply the automotive sector or produce gear wheels for special gears – the experts at CERATIZIT can develop exactly the product you need. Working with you as partners we will create your carbide hobs for large-batch and high-volume production. As a leading carbide manufacturer our expertise covers the entire process chain of cemented carbide production, up to provision of the blanks which are of course delivered just in time to your production department.

Benefit from maximum process reliability while increasing production efficiency on a permanent basis – with hobs from CERATIZIT.

Advantages

Advantages and benefits

Configurator in the online shop for automated blank production around the clock	Immediate preparation of a quotation, time saving
Near net shape for the minimum possible grinding allowance, close sintering tolerances	Speedy and economical processing thanks to reduced grinding work
Premium carbide grades for maximum tool life	Longer service life = reduced payback time
Higher cutting speeds compared to steel or PM steel	> Faster gear wheel production
5-axis machining	Reliable production of the most complex geometries

Benefits

Hobs are also suitable for dry machining

Optimized ratio of hardness to toughness

Stock management and production procedures

Fewer cutting edge chippings, with more demanding manufacturing conditions. This ensures a more stable process and at the same time, a longer service life.

The optimised process chain guarantees

Versatile application of CERATIZIT blanks

minimum delivery times.

for hobs

Higher toughness (KiC value)

Fine-grain grade CTF20D:

specially tailored to hob blanks

Fewer edge chippings due to increased toughness, even when 6 %-Co carbide grades are used.

Fine-grain grade CTF12D:

Dialogue – efficiency – progress

Our online configurator makes ordering of hobs a revolutionary experience. In just a few steps you can now create your individual blank here, when and wherever you wish. Alternatively, you can of course still send us a drawing which will be used as a basis for your individual calculation and for the **design of your near-net-shape hob blank**. This minimises the costs for you – efficiency starts right away with the enquiry, and continues well into the production process.

As a result CERATIZIT products offer the ideal conditions for **final products with a perfect finish.** Ultramodern cutting machines can handle **even the most demanding gear geometries,** in batch sizes between 1 and 250 items. We stand for more **customer benefit** in gear wheel production – with premium hobs from one of the world's leading carbide experts.

Preform Sintered part

Choose from the following options

Not only are hobs highly productive, they are extremely flexible. Any number of teeth, all kinds of profile displacements and any inclination angle you specify can be obtained.

One challenge, one solution and one choice: CERATIZIT.

Shank-type hobs with gashes Internal product code: WFSN

Hobs with bore

Soft milling < 58 HRC	✓	×

Online configurator – the benefits of automation

With its configurator, the online shop offers new possibilities. You can build your individual hob blanks very easily with just a few clicks. Try out the configurator feature in our online shop, when and wherever you want! Benefit from automated quotations to your exact conditions. You can then save your configuration for later processing and final ordering, or order directly!

Your order in just a few steps

Enter the finished dimensions of the requested hob.

You will immediately receive the offer for your blank (can be saved online or offline).

You can order either directly, or else later, when you receive the order from the end-user.

Your benefits at a glance

▲ Complete flexibility and unimaginable celerity

Receive your quotation around the clock, after just a few clicks in our online shop. Our configurator designs the blank for your hob, calculates the price and offers you a customised product, all on a fully automated basis.

▲ Easy data input and quick checking

The configurator defines your product in an easy and intuitive way. By visualising the 2D drawing together with the entered dimensions, you can check your input quickly and reliably by comparing the sketch of your enquiry with the displayed drawing.

▲ New networking possibilities

Our configurator prepares the routing, the bill of materials and a 3D model including a 2D drawing of the ordered blank. Based on this networking, our production kicks in only a few moments after your order has been

placed. Upon request we can send you the 3D model (STEP) and the 2D drawing (PDF) within one hour. So the drawing can be approved within a short time and your article defined in your CAD data from the blank right through to the finished product.

▲ Tooling a Sustainable Future

The online configurator has created the basis for fully automated order handling. On the road to paperless production, product definition based exclusively on 3D data and many other interim goals associated with networked production we are one step ahead.

Premium carbide for reliable processes

Your premium carbide solutions withstand the highest loads while showing little wear. For the production of customer-specific hobs CERATIZIT offers a number of carbide grades. Based on the geometry and application, we will be happy to offer you the optimum grade. All cutting edges of our hob blanks are extremely stable thanks to the very homogeneous carbide, which guarantees reliable processes.

Application fields

Hobs may be used for example for the production of gear wheels, worm wheels or gear racks in the following sectors:

- **▲** Automotive
- ▲ Mechanical engineering
- ▲ Watch industry
- ▲ Power engineering

Hard Material Solutions

Hard cases are our speciality

We are your ideal partner when it comes to high-quality hard materials for production processes, tool manufacturing and wear protection.

From standard products to tailor-made solutions, from massive components to minute parts, from the blank to the fully finished product – a product that meets the highest standards of precision, surface treatment, and user-friendly assembly – our carbide solutions ensure improved efficiency and outstanding total cost of ownership.

This is the case in a variety of application fields and industrial sectors. Even when subjected to extreme stress, our cemented carbides are notable for the high flexibility they offer in numerous industries. Our products are specially designed for extreme working conditions, making our Hard Material Solutions impressive tools for optimising your processes and increasing wear resistance.

Product portfolio

- ▲ Blanks and semi-finished products
- ▲ Waterjet cutting
- ▲ Blanks for hobs
- ▲ Drawing tools and drawing nibs

Solutions for:

- ▲ Tool and die industry
- ▲ Fastening industry
- ▲ Injection technology
- ▲ Health industry
- ▲ Plastics industry

CERATIZIT Group

For over 100 years, CERATIZIT has been a pioneer in developing exceptional hard material solutions for machining and wear protection. The private company, with registered offices in Mamer, Luxembourg, develops and produces highly specialised cutting tools, indexable inserts, rods made from hard materials and wear parts.

The CERATIZIT Group is the global market leader in various application segments and successfully develops new carbide and cermet grades, such as for wood and stone working.
